

Werry's

An ingenious utility device invented by Werry!

TRANSFORMER

In the early 60's Werry invented a gimmick that blew away thousands of magicians in Europe. Since then, others have not been able to match up to the original...

Show a coin, lay it on your outstretched hand or on the table, cover it for a second with the other hand and it's gone!

Place a coin on the table (no, there is no metal shim in it...) and give a spectator an examined glass to hold under the table. Touch the coin on the table with your hand and the coin penetrates through the table and lands in the glass held by the spectator!

Put a 25 Cent piece onto the table, touch it with your fingers and it changes to a half dollar!

- Sets up within seconds!
- Can be repeated over and over again!
- No magnets and gimmicked coins!
- Vanishes/ exchanges coins of any currency and metal!
- Appearing coins can be up to Halfdollar-Size!
- Also exchange billets/pieces of paper easily!

USE ANY CURRENCY!
